EXAMPLES

Showing code

Code slides and escapes

Code snippets

Do you have some code to show on the slide?

And the same frame should also contain text?

```
class example {  
    // \codedots shows grayed-out dots  
    ...  
};
```

You can use `cxxcodebox` environment. It has `cxx` in the name, but no syntax highlighting is performed.

For short code snippets, it is better just to highlight the important parts.

Second slide

```
class example {  
    // There are a few useful escapes here  
    ... // \codedots shows grayed-out dots  
  
    // Invalid parts can be marked with \hlErr  
    operator;  
  
    // Good parts can be marked with \hlOk  
    operator() ()  
  
    // Other highlighting commands can be seen in  
    // the preamble.tex file  
};
```
